disbursements to projects (in USD millions)

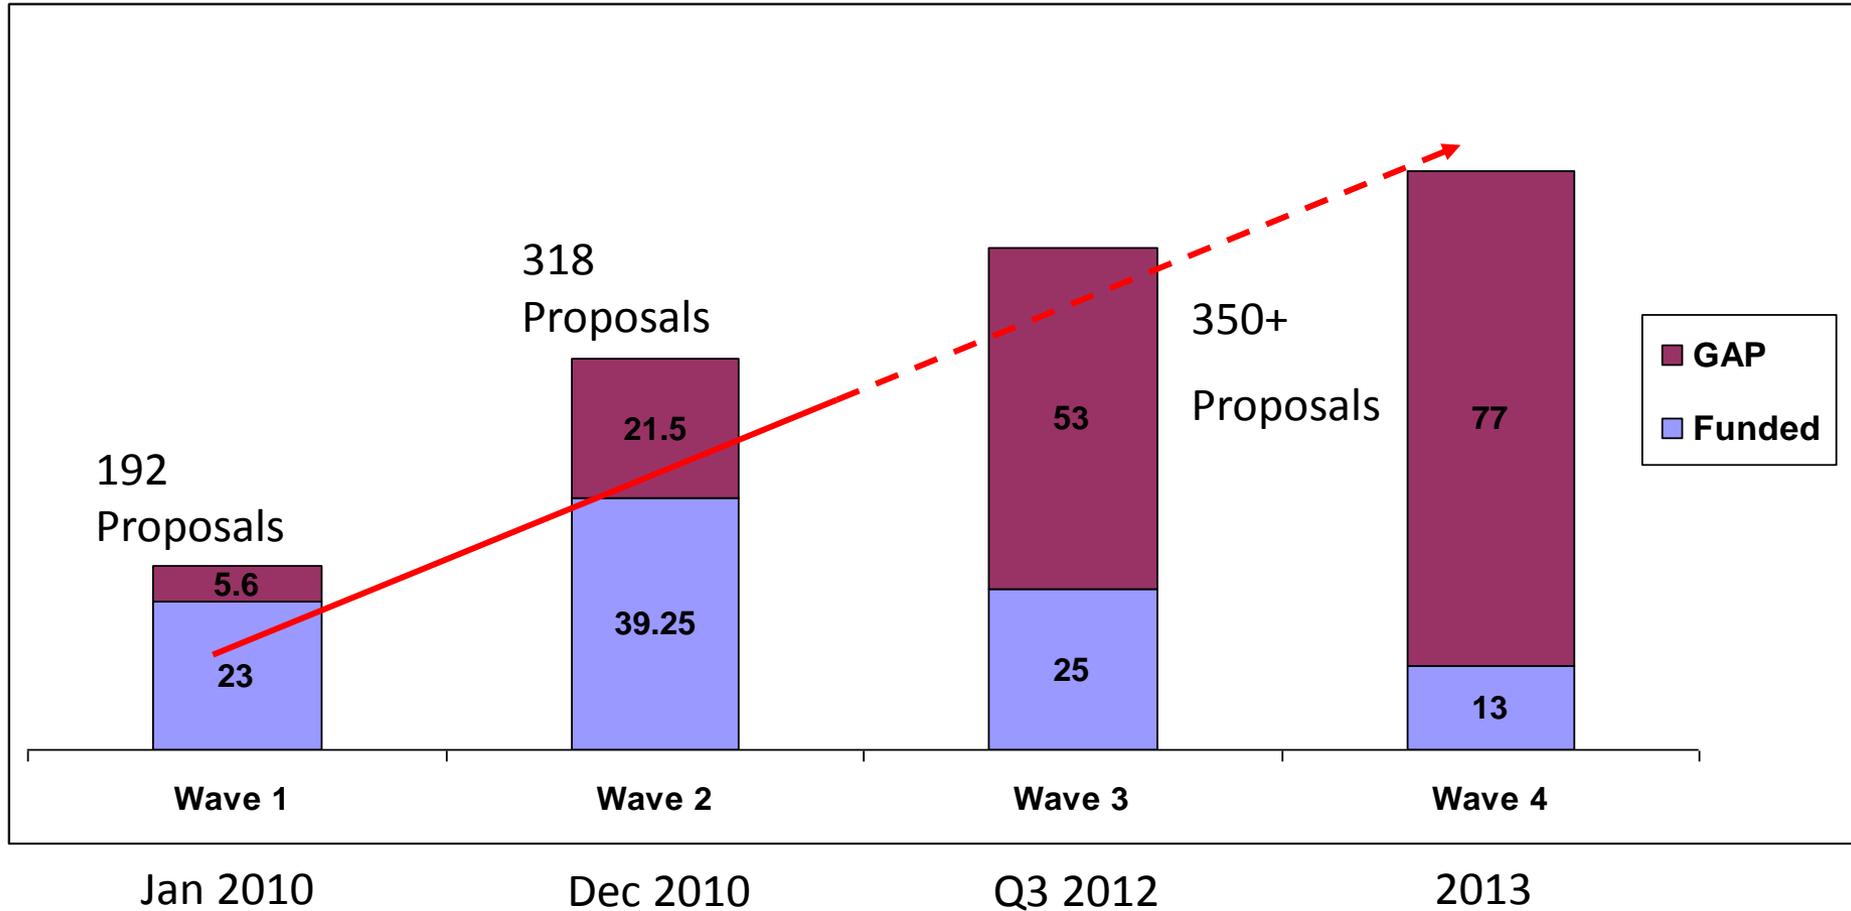

Key PSG Recommendations

PSG appreciated the rapid progress, quick results and the positive impact on TB case detection seen in the TB REACH intervention population.

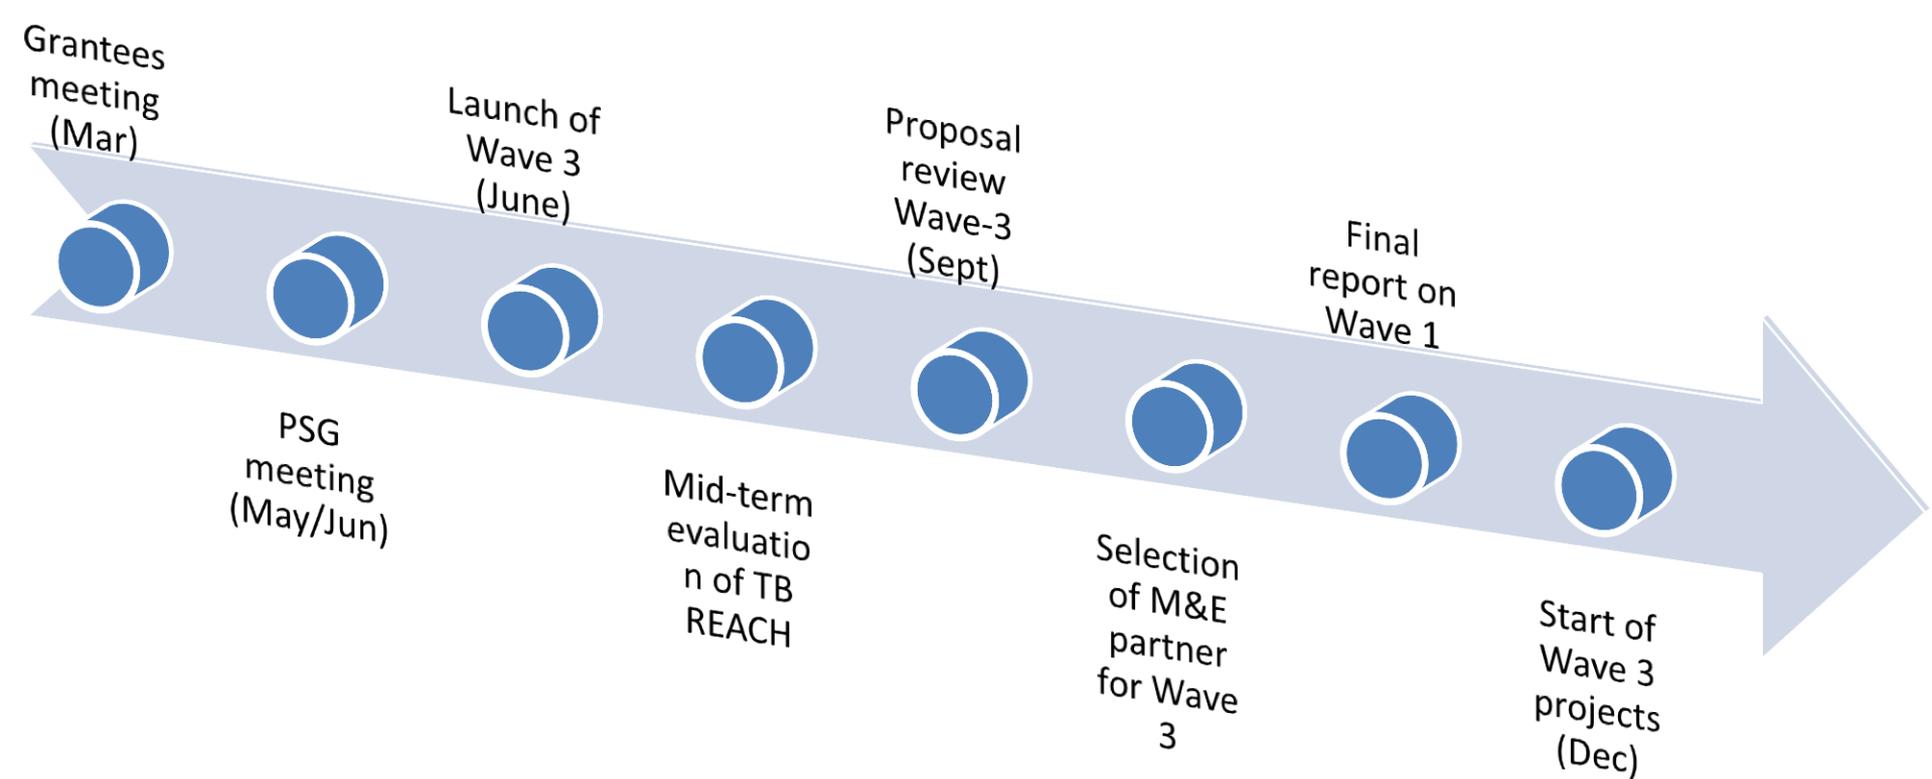

Recommended:

1. Pursue the plans for **dissemination** of the successes of wave 1 projects with a view to impact national policy and sustain/replicate/scale-up successful projects.
2. Work with the Executive Secretary and the advocacy team in the Stop TB Partnership Secretariat to **make TB REACH a multi-donor initiative**
3. Plan for a **mid-term evaluation** in 2012. Consider appointing a committee for overseeing the process.
4. Implement TB REACH Wave 3 and 4 as planned.
5. Prior to Wave 3 announcement decide in consultation with the PSG any areas of focus, e.g. TB/HIV, new diagnostics, childhood TB, etc.
